SMITH'S

HOMŒOPATHIC PHARMACY

488 Broadway & 105 Fourth Avenue,

NEW-YORK.

J. T. S. SMITH,

Has for sale a general assortment of Homœopathic Triturations, Tinctures, Dilutions and Pellets, including the higher attenuations, both imported and of his own preparation.

Cases for Physicians' and Family use, of various sizes and prices.

Pure Sugar of Milk, Alcohol, Distilled Water. and Unmedicated Pellets, constantly on hand.

Smith's Homœopathic Arnica Plaster, a substitute for the ordinary Court Plaster.

INTRODUCTION.

THE DESIGN, COMPILATION, AND ARRANGEMENT OF THE MANUAL.

The design in the compilation of this Manual has been threefold: first—to furnish Physicians, and especially beginners in Homœopathic practice, with a convenient *Vade Mecum*, or work of ready reference, at the bedside of the patient. Secondly: to provide Travellers, who are liable to attacks of illness where it is impossible to procure the services of a Homœopathic physician, with a valuable *Medical Companion*. And lastly, to supply Families, residing at a distance from any Homœopathic physician, with a work which may be used by them, as a *Family Physician* in *cases of emergency*, and for many of the *minor ills* that flesh is heir to. Yet in reference to the use of this work in families, and by laymen in general, the compiler would remark, that *no individuals whose knowledge of Medicine, or acquaintance with Homœopathy, is limited to this, or any similar production, should assume the responsibility of treating severe and dangerous diseases, except in cases of emergency, and then, only until the services of a Homœopathic physician can be procured; for neither this Manual, nor any work of the kind ever published, can supply the place of the intelligent Homœopathic physician at the bedside of the patient.*

In the compilation of this Manual, the Materia Medica of Hahnemann, the Manuals of Jahr and Bonninghausen, the Transactions of the American Institute of Homœopathy, the works of Hartman, Hering, Laurie, and other distinguished Homœopathic writers and practitioners have been consulted; and the Principal Remedies, for the most Important Diseases, Symptoms, Sensations, and Characteristics of diseases, have been given, with the Principal Pathogenetic effects of the

Digitized by UNIVERSITY OF MICHIGAN
Original from UNIVERSITY OF MICHIGAN

Medicines, on the most important Organs, and Functions of the Body, with their relative value typographically distinguished under their respective heads; and Alphabetically and Nosologically arranged in the following order, viz: The most important *Diseases*, *Organs*, and *Functions* of the body—*General Symptoms* and *Sensations*—*Causes* and *Characteristics* of diseases, and such Affections as have a *Pathological name*, are given as PRIMARY HEADS, and printed in CAPITALS. Under these Primary heads, are given, in SMALL CAPITALS, the *Symptoms*, *Causes*, *Conditions*, *Concomitants*, *Varieties of the Disease*, etc., belonging to each primary head. Under these *Subordinate heads*, which are printed in SMALL CAPITALS, are given, in *Italics*, the *variety of Symptoms*, *Sensations*, *Causes*, *Conditions*, etc., belonging to each subordinate head; and thus the *print*, following in the *descending order*, distinguishes the *Subordinate* from the *Primary heads*. A glance at the Manual will show its arrangement, and by bearing in mind its *Alphabetical order*, it will be easily understood.

The Medicines have been divided into *three classes*, according to their *relative value*, as indicated by the print. Those printed in CAPITALS, are medicines, which, from their pathogenetic, or curative effects, are *most frequently indicated* for the diseases, symptoms, sensations, etc., under the head of which they appear. Those printed in *Italics*, are medicines of high relative value, but *less frequently* indicated than those printed in Capitals. The medicines printed in simple Roman letters, are those which *in general*, are the *least frequently* indicated, and possess the lowest relative value. Yet too much importance must not be attached to the relative value of the medicines as indicated by the print, as in many cases the *Pathogenetic effects* of those medicines which are set down as being of the lowest relative value, will be found bearing the *nearest resemblance to the Symptoms manifested by the disease*, and in all *such cases*, they are medicines of the highest relative value, and are to be selected in preference to those printed in capitals, or italics.

ON THE SELECTION OF REMEDIES.

The fundamental principle of Homœopathic practice—THE LAW OF CURE—as discovered, demonstrated, and promulgated by the illustrious Hahnemann, and expressed by the maxim "*Similia Similibus Curantur*," is, that "*diseases are cured most*

Digitized by UNIVERSITY OF MICHIGAN Original from UNIVERSITY OF MICHIGAN

quickly, safely, and effectually, by medicines which are capable of producing symptoms SIMILAR *to those existing in the patient, and which characterize his disease:*" for in accordance with the THERAPEUTIC LAW OF SIMILARITY, medicines cure affections *Similar*, or *like* unto those they produce.

Laymen, in the selection of a remedy, should, in the first place, carefully note down ALL *the Symptoms of which the patient complains*, together with the *state of mind*, and *characteristics of the disease, as regards its aggravation or amelioration according to time, circumstances*, etc.; and then proceed to collect from under the heads of the various organs, functions, sensations, etc., all those medicines, the effects of which *correspond to the various symptoms, sensations, and characteristics of the disease;* and then, from the list of medicines thus collected, select, and exhibit, that medicine, the effects of which *most nearly correspond to* ALL *the symptoms, sensations, and characteristics of the disease*, and especially to *all the most* PROMINENT, CHARACTERISTIC, *and* LEADING SYMPTOMS of the case.

If the disease is one which has a given or *pathological name*, it will be well for laymen, *after* they have made their selection of a remedy according to the directions above given, to look under the head of such given name of the disease, and see if the remedy selected is there enumerated, or set down, as being one of the remedies usually indicated in the treatment of such disease; and, if it is there found, and especially if it is there distinguished as being of high relative value, it will strengthen the probability that the selection has been judiciously made. But if the remedy is not found under the head of such given name of the disease, a re-examination should be made, in order to see that no error has been committed in the selection of the remedy. Yet, if after such re-examination, it does not appear that any error has been made in the selection, but that the remedy chosen *most nearly corresponds to the* TOTALITY OF THE SYMPTOMS *and characteristics of the disease*, it should then be exhibited in preference to any other, whether found under the head of the disease or not.

If, in making the selection of a remedy, the choice should fall between two or more remedies which seem equally indicated according to the totality of the symptoms, and characteristics of the disease, the preference should be given to that remedy which is distinguished by the print as being of the highest relative value.

Digitized by UNIVERSITY OF MICHIGAN
Original from UNIVERSITY OF MICHIGAN

If the producing cause of any given case of disease is discoverable, and is such that its removal falls within the province of medicine, as grief, fright, repelled cutaneous eruptions, etc., especial reference should be had, in connection with the symptoms, to those remedies, under the head of the said disease producing cause.

ON POTENCIES.

The medicines have been used by physicians at various Potencies, from the Mother tinctures, to the two thousandth attenuation. It is recommended, that laymen who use this Manual, should make use of potencies ranging from the *third*, to the *thirtieth attenuation;* and in such cases as require a higher, or lower attenuation, in order to complete the cure, the choice or selection of the potency should be left to the judgment of an experienced Homœopathic physician.

ON THE ADMINISTRATION OF MEDICINES.

The medicines may be administered by placing three or four globules of medicated pellets on the tongue, or eight or ten pellets may be dissolved in an ordinary sized tumbler two-thirds full (about a gill and a half) of pure soft water, and agitated or stirred for several minutes, until the medicine is perfectly dissolved and incorporated with the water; and a tea-spoonful of the solution given to children, and a small dessert or table-spoonful to adults. When the medicines are used in the form of Triturations, or Dilutions, from one to three drops of the dilution, or one-third of an ordinary sized penknife blade full (about one grain in weight) of the trituration may be prepared in the same quantity of water, and administered in the same manner as directed for the pellets in solution. Care should be taken that the vessel—tumbler or cup, in which the medicine is prepared, should be *perfectly clean*, and a tumbler or *glass* vessel should always be preferred in the preparation of the medicine. Cups which have been long used, as coffee or tea cups, are objectionable, and especially if the glazing is cracked, worn off, or imperfect. The medicine should be kept in a cool place, free from odors of every description, and so closely covered as to prevent the access of air. The spoon, unless it be made of silver, should never be suffered to remain in the medicine; and the same vessel should never be used for different medicines, until it has been washed and thoroughly cleansed.

ON THE REPETITION OF DOSES.

It is difficult to give explicit directions for the repetition of doses, as the time must necessarily vary according to the nature of the disease and circumstances of the case. Consequently much must depend on the judgment and discrimination of the administrator. In *acute diseases*, the proper interval between the repetition of doses, will, in general, vary from one to six hours, according to the nature of the case, or severity of the disease. In those severe and dangerous diseases, which rapidly run their course to a fatal termination, unless arrested in their progress, as Croup, Cholera, etc., it may be necessary at the commencement of the treatment, to repeat the dose at intervals of every ten, twenty, or thirty minutes, until there be a mitigation of the symptoms, when the interval between the doses should be lengthened as the patient improves.

In *chronic diseases*, the proper interval between the repetition of doses, will vary from twelve hours to as many or more days. Laymen, in prescribing for chronic diseases, should, after the exhibition of the remedy selected, carefully watch the result, and if after the lapse of twelve, or twenty-four hours, no effect of the medicine is discoverable, and the disease remains apparently the same, the same remedy may be repeated at intervals of every twelve, or twenty-four hours; and if, after several repetitions of the medicine, no effect is discoverable, it should be discontinued, and another remedy selected and exhibited with the same precaution as before. If an improvement follows the exhibition of a remedy, no more medicine should be given while the improvement continues. Yet when it ceases, and the remaining symptoms still indicate the same remedy, it may be repeated. If, after the exhibition of a remedy, a *slight aggravation of the symptoms characteristic of the medicine* should *speedily* follow its administration, no more medicine should be given, but we should patiently await the result. If the aggravation has been produced by the medicine, it will soon subside, and be followed by an improvement in the condition of the patient, which improvement should not be interfered with, but permitted to proceed without any more medicine until there is no further progress toward a cure; afterwards, the same remedy may be repeated, unless some other remedy is more clearly indicated by the remaining symptoms.

If the *medicinal aggravation* should be *violent*, and harass-

Digitized by UNIVERSITY OF MICHIGAN Original from UNIVERSITY OF MICHIGAN

ing to the patient, it may be necessary to counteract the effects of the medicine by a suitable antidote; afterward, when the aggravation shall have entirely subsided, and the same medicine shall still be indicated, it may be repeated, and a severe aggravation guarded against, by administering a much *smaller dose.*

ON THE CHANGING OF MEDICINES.

It is necessary that laymen, and beginners in Homœopathic practice, should guard against a too frequent change of medicines. It may be laid down as a general rule, that a medicine which has been carefully selected and exhibited in conformity to the directions herein given for the selection and exhibition of remedies, should not be changed until a reasonable length of time has been allowed for its action, or while it continues to exert a salutary influence; or until a change of symptoms shall clearly and decidedly indicate some other remedy. *The frequent changing from one remedy to another, is a miserable, and most mischievous practice.* Yet a remedy should always be changed after a reasonable length of time has been allowed for its action and we perceive no effect, or when the effect is unfavorable. But respecting this last, care must be taken not to mistake a slight and salutary *medicinal aggravation*, for an unfavorable effect. A medicinal aggravation may be known by the *sudden* aggravation of the symptoms after the exhibition of the medicine—and especially of those symptoms which are *characteristic of the medicine* exhibited; which aggravation will soon subside, and be followed by an improvement in the condition of the patient. An *unfavorable effect* may be known by the *gradual* and *progressive aggravation of the disease*, and without its partaking of the characteristics of the medicine, and without any amelioration in the sufferings of the patient, but rather a continuous increase of suffering, and the manifestation of such symptoms as belong to the more advanced stages of the malady.

ON DIET.

All articles of diet, and drinks, which contain *medicinal properties*, are strictly prohibited under Homœopathic treatment: as, coffee, green tea, and herb teas of every description; ginger, pepper, vinegar, mustard, allspice, cinnamon, cloves, and spices of all kinds: and every variety of vegetable food of an *aromatic* or *medicinal character*; as onions, garlic, asparagus, radishes, tomatoes, celery, parsley, parsnips,

Digitized by UNIVERSITY OF MICHIGAN
Original from UNIVERSITY OF MICHIGAN

artichokes, mushrooms, etc.; and every variety of animal food, *strong scented*, or *difficult of digestion*; as old smoked meat, bacon, fat pork, sausages, tongue, veal cutlets, rancid butter, strong cheese, and the flesh of all *very young animals:* in short, every variety of food usually considered objectionable, or of a *doubtful character* for invalids, is strictly prohibited under Homœopathic treatment.

In acute diseases, the diet should consist of the most light and nutritious kinds of food; such as toast water, barley water, rice water, panada, arrowroot gruel, and such other light and simple kinds of food as are generally allowed in such cases. When the more violent symptoms of the disease have subsided, and the patient is convalescent, more substantial food may be allowed, *in moderate quantities*, such as beef tea, chicken tea, boiled rice, farina, toast, rice and bread puddings, light bread, and biscuits free from soda or pearlash, and *not newly baked:* and in most cases, where there is neither colic nor diarrhœa, *sweet*, *ripe*, and *juicy* fruits may be allowed in moderate quantities at a time, such as *sweet grapes*, *sweet cherries*, and *ripe peaches*.

In chronic diseases, almost every variety of *wholesome*, *nutritious*, and *easily digested* food may be allowed, providing it does not answer the description of such kinds of aliments as are above prohibited.

As a *drink*, pure *water* should be allowed in all cases, except it disagree with the patient, and in such cases toast water, barley water, or rice water should be substituted.

RULES TO BE OBSERVED UNDER HOMŒOPATHIC TREATMENT.

In addition to what has already been said under the preceding heads, it is important, under Homœopathic treatment, to enjoin the absolute necessity of guarding against all extraneous influences which may have a tendency to neutralize or counteract the effects of the medicines—as medicated baths and poultices, the smelling of camphor, hartshorn, cologne, and all kinds of flowers and perfumery. Cosmetics and tooth powders are to be avoided; and all kinds of artificial and mineral waters, distilled and fermented liquors, unless allowed by the physician. The room of the sick should be well ventilated, and be kept free from all odors. Flowers, and plants of every description, should always be excluded from the chamber of the sick. Strong mental

Digitized by UNIVERSITY OF MICHIGAN Original from UNIVERSITY OF MICHIGAN

emotions, as anger, grief, care, etc., should be guarded against. In short, every variety of circumstance, whether of a physical or moral nature, which might have a tendency to counteract the influence of the medicines, or retard the recovery of the patient, should be carefully avoided.

CONCLUSION.

In presenting this work to the profession and the public, the Compiler would remark, that he has by much labor, diligent research, and careful comparison, endeavored to compile a large amount of valuable matter, in a correct, brief, and comprehensive manner. Yet it is not pretended that this Manual is a *full, complete*, or *perfect* Repertory, or that in its compilation all errors have been avoided, and especially such as regard the true *value of the remedies* in all cases, as indicated by the print. Yet the Compiler flatters himself that the work will be found in the main, as substantially correct as any other of the kind that has yet appeared in the English language; and if the work, as it is, shall be found to answer the general purposes for which it is intended, and contribute in any degree to the advancement of the interests of Homœopathy, and the consequent relief of human suffering, the object in its compilation will have been gained.

LIST

OF

MEDICINES CONTAINED IN THIS MANUAL,

WITH THEIR

TECHNICAL NAMES, ABBREVIATIONS, AND ANTIDOTES.

NOTE.—In the following list, the POLYCHREST medicines, or those which have hitherto been *most extensively used*, are printed in SMALL CAPITALS—and the chief of them distinguished by an asterisk: the *Semi-polychrests* are printed in *Italics;* and those which have been less extensively or seldom used, have no distinction.

MEDICINES.	ABBREVIATIONS.	ANTIDOTES.
1. *ACONITUM NAPELLUS.	Acon.	Camph. nux-v.

AMAUROSIS (gutta serena, paralysis of the optic nerve).

Diagnosis. Blindness without obscuration of the humors of the eye. The pupil is dilated, and the contractility and sensibility of the iris to light is greatly diminished, or entirely annihilated. In *amaurosis erethistica*, the blindness is only partial, and the symptoms nearly the reverse of the above; the eye exhibiting an *extreme sensibility to light*, the patient seeing best at dusk, or when the light is very feeble; all colors appear brighter, and white objects appear brilliant: the pupil is contracted—sometimes movable, and at other times distorted, and sometimes contracting in a very irregular manner. In either form of the disease the cure is often difficult. The principal remedies, are, IN GENERAL, for

ARTHRALGIA (pain in the joints). See: JOINTS.

ARTHRITIS (gout). *Diagnosis.* A peculiar and painful inflammation, or chronic cold swelling in the joints; occurring at regular or indefinite periods; and frequently producing nodosities, and calcareous formations. The pains are generally severe, and often of a wrenching, burning, or scalding character; and sometimes suddenly changing from one location to another. *Remedies,* IN GENERAL: *Acon.* agn. *ant.* ARG. ARN. ars. asa. bar-c. *bell.* bov. *brom.* BRY. *calc.* canth. carb-an. *caus.* cham. *chin.* cocc. ARTHRITIS:
TOES (in the): Amb. *arg. arn. caus.* chin. cin. *kal.* LED. lyc. nux-v. rhus. SABIN. *sep.* stront. SULPH. *zinc.*
Consult *causes*,—compare PAINS; and see: NODOSITIES, ARTHRITIC, &c.

ARTHROCACE (morbus coxarius). See: COXARTHROCACE.

ASCITES (dropsy in the abdomen). *Diagnosis.* Tumefaction and tension of the Abdomen, with fluctuation on percussion, and gravitation of the swelling to the posture of the patient. Thirst, dryness of the skin, mouth, and tongue, with scanty and high-colored urine; and, frequently, fever, cough, intermittent pulse, and oppressed respiration are its accompaniments. *Remedies,* IN GENERAL: ACON. *ant.* ARS. *bry.* CHIN. COLCH. *dig.* HELL. kal. *led.* lyc. *merc. prun. sep. squill. sulph.*
Consult *causes*—compare with the *particular symptoms,* and see: DROPSY.

ASPHYXIA (apparent death). *Remedies,* IN GENERAL: Acon. arn. *ars.* bar-c. bell. *carb-v. chin. coff. lach.* laur. nitr-ac. nux-v. *op.* ph-ac. *tart.*
DROWNING (from): Elevate the head and shoulders, cleanse the mouth and nostrils, apply friction and heat; and give Lachesis on the tongue, and in injections. If these means fail, place the body in a warm bath, rub briskly, yet gently with the hand; cautiously apply spirits of hartshorn, or spirits of camphor to the nostrils, and carefully endeavor to inflate the lungs. It is said that passing a stream of electricity or galvanism through the chest promises to be of great service.
FROST or Cold (from): Rub or cover the body with snow, or use a cold salted bath. Give small injections of camphor, and if signs of life appear, use small injections of coffee. When able to swallow, give a few tea-spoons full of weak coffee; and for the pains succeeding restoration, give, Ars. or carbo-vegetabilis.
HUNGER, or Starvation (from): Give injections of warm milk. When able to swallow, give a few drops of milk, gradually increasing the quantity to a tea-spoonful; afterward a little chicken or beef tea. Beware of hearty, or much food for several days.
LIGHTNING (from): Strip, and dash cold water on the body, and especially on the neck, face, and chest. If the body be cold, apply warmth and friction; and carefully en-

ASPHYXIA:
deavor to inflate the lungs. Also, give arn ? or nux-v. on the tongue, and in repeated injections.
MECHANICAL INJURIES,—Falls, Bruises, &c. (from): Give Arnica on the tongue, and a weak solution by injection. If much blood has been lost, give Chin. and afterward Arn. If no blood has been lost by the injury, bleeding may sometimes be of benefit.
NEW-BORN INFANTS (of): Give *Tartar eneticus;* if it fails and the face be *red*, give Acon.—if *pale*, Chin.—if *blue*, Op. and use friction, and a warm bath.
NOXIOUS VAPORS, or deleterious gases (from): Place the body in a current of fresh air: and dash cold water on the neck, face, and chest; sprinkle the face occasionally with water and vinegar, and as the patient revives apply it occasionally to the nose. Also, give *Acon.* bell. Op. or nux-v. and See: POISONS.
STRANGULATION (from): Give op. on the tongue, and a few drops of the tincture in injections. Carefully inflate the lungs; and use warmth, and friction.
ASTHMA (a disease in which difficulty of breathing is the predominant symptom). *Diagnosis.* Dyspnœa without fever, occurring in paroxysms attended with a sensation of suffocating constriction of the chest, with cough, and wheezing respiration. In some cases the cough is dry (*asthma sicca*), in other cases the cough is attended with expectoration (*asthma pituita*); the expectoration is at first scanty and glutinous, and afterward more copious; relief is generally afforded as the expectoration increases in quantity. The principal remedies, are, IN GENERAL: *Acon. am-c.* am-m. ant. CHOLERA (Asiatic cholera, or cold plague). *Diagnosis.* In the most common variety of this disease, the attacks are *usually preceded by a diarrhœa*, in which the evacuations, consisting at first of fecal matters, shortly become yellowish, greenish, and watery, and finally *flocculent*, having the appearance of *rice water with little flocks or specks floating in it.* Shortly after this, the patient is attacked with violent vomiting, and purging, cramps, pains in the stomach and abdomen, with great anxiety, weakness, coldness of the extremities, or of the whole surface of the body. The urine and perspiration is entirely suppressed; the pulse small, intermittent, or imperceptible; the skin cold and bluish, and the countenance hippocratic. IN GENERAL, the *Principal Remedies* are: *Ars.* bell. CAMPH. carb-v. cham. cic. *cupr.* hydr-ac. *ipec. jat.* nux-v. phos. ph-ac. sec. VERAT.

In the *majority of ordinary cases* of Cholera, *two drops of the Tincture of Camphor* should be given in a *dessert-spoonful of sugar water*, every ten or twenty minutes, *during the first hour;* and if improvement follow, continue the remedy at longer intervals, until the most alarming symptoms have subsided, when some other

CHOLERA:

remedy should be selected in accordance with the remaining symptoms.

In *slight attacks* of Cholera, *Ipec.* and *verat.* may be given in alternation, once in fifteen minutes at the commencement of the treatment, and the interval between the repetition of doses lengthened as the patient improves.

In *all cases*, where there is *neither thirst, vomiting, nor purging*, but *rapid failure of strength, blueness, and icy coldness of the body, burning pains in the stomach, inconsolable anguish*, and *dread of suffocation*, give CAMPHOR, as above directed. If spasms ensue, with cramps in the calves of the legs, great thirst, *weakness, excessive coldness, frequent, sudden, and violent vomiting and purging*, VERATRUM is the principal remedy. If, in addition to vomiting and diarrhœa, there is *pressure in the stomach and epigastrium, violent pains in the abdomen, spasmodic colic*, and *bloody evacuations*—*Cuprum* should be exhibited. When there is *great anxiety, excessive anguish, fear of death, violent thirst, intolerable burning in the stomach and bowels*, with *cutting, cramplike pains in the abdomen, scalding evacuations, cold and clammy skin*, ARSENICUM *is the remedy.* In the last stages of Cholera, or *Stage of Collapse*, give: *Ars. camph.* CARB-V. cic. cupr. *hydr-ac.* laur. phos. ph-ac. sec. or *veratrum*, in accordance with the *particular symptoms*, which see: under their respective heads.

For *Cholerine* or the *diarrhœa preceding an attack of Cholera*, or during the prevalence of the epidemic, Consult: Ars. camph. cham. ipec. nux-v. *phos. ph-ac.* sec. verat. and *compare* with: DIARRHŒA.

As *Prophylactics*, or preventives of Cholera, *Camphor, Cuprum*, and *Veratrum* enjoy the highest reputation. The former to be taken in a dose of one drop of the tincture before entering the room of a cholera patient; and the two latter to be taken in alternation, in doses of four or six globules of the third potency, every other morning.

For a description of the several varieties of this disease, and the corresponding treatment, see Joslyn's, Humphrey's, and other works on Cholera.

CHOLERA INFANTUM (summer complaint in children).

See: DIARRHŒA.
