

The Internet, edited by Brian Cooper, et al. (128 pages, October 1996), is one of the easiest and most practical guides to getting connected available today. Unlike other handbooks that get caught up with Unix commands and overwhelm the Net newbie with 20 pages of TCP/IP protocol history, the text is spare and the graphics are splendid. The only catch is that this book is specifically for Windows 95 users. Here are some of the user-friendly contents: using Windows 95 to configure your modem; questions you should ask a new service provider; time-saving e-mail tips; handling cookies; choosing the right search tool; configuring an IRC client; exploring virtual worlds. An excellent book for beginners as well as for those who haven't quite been keeping up with it all. \$16.95. DK Publishing, 95 Madison Ave., New York, NY 10016. ISBN 0-7894-1288-8.

The Bernard Becker Collection in Ophthalmology: An Annotated Catalog, compiled by Lilla Wechsler, Christopher Hoolihan, and Mark F. Weimer (180 pages, 3d ed., July 1996), describes the holdings of this collection at Washington University's School of Medicine in St. Louis. One hundred additional items have been cataloged since the second edition was published in 1983. New to this edition are 18 color illustrations depicting ophthalmological history. \$45.00. Washington University, Bernard Becker Medical Library, 660 S. Euclid Ave., Box 8132, St. Louis, MO 63110. ISBN 0-912260-13-0.

Developing and Managing Video Collections, by Sally Mason-Robinson (133 pages, September 1996), is a practical manual for librarians faced with expanding their video holdings. The author covers evaluation, selection, policies, cataloging, display, and future technologies. Appendices contain *Booklist* criteria for evaluating nonprint materials, a model video evaluation form, applicable interpretations of the Library Bill of Rights, and prominent video festivals and awards. \$39.95. Neal-Schuman Publishers, 100 Varick St., New York, NY 10013. ISBN 1-55570-230-9.

An Inordinate Fondness for Beetles, by Arthur V. Evans and Charles L. Bellamy (208 pages, December 1996), is a bug-lover's bible. The title is taken from an alleged remark by the British scientist J. B. S. Haldane who, when asked what could be inferred about the work of the Creator from a study of His works, replied, "an inordinate fondness for beetles" (Ringo was His favorite).

Approximately 350,000 species of beetles have been described since 1758, an average of slightly more than four per day. Not all of them are cataloged here, but readers will get a close and colorful look at the Coleoptera in this well-illustrated volume. Chapters cover beetle anatomy and habitat, fossils, behavior, interactions with humans, collecting, and conservation. \$40.00. Henry Holt and Co., 115 W. 18th St., New York, NY 10011. ISBN 0-8050-3751-9.

Catalogers will welcome **LC's Classification Plus** on CD-ROM. A full-text, Windows-based application, it contains the latest LC classification schedules and the complete Library of Congress Subject Headings (LCSH). Hypertext links between LCSH and the schedules are especially helpful. Users can view headings in an expandable hierarchical display and construct complex queries using boolean, keyword, phrase, wildcard, and proximity searching. The infobase itself can be modified by creating shadow files that allow notes, highlighting, bookmarks, and additional links without altering the original data. The program can be used either on a single-user workstation or on a LAN server. Classification²⁰Plus is available as an annual subscription with quarterly issues for \$410 in North America for a single user, and \$16 per additional user. A demonstration version is available from the Catalog Distribution Service Web site at <http://www.loc.gov/cds>. For more information, contact Customer Service, CDS, P.O. Box 75720, Washington, DC 20013. ■

George M. Eberhart is associate editor of American Libraries

SILVERPLATTER INFORMATION

ACRL Conference

April 11 - 13

Booth # 509

Your Information Destination

SilverPlatter offers a complete solution

By choosing SilverPlatter to provide access to your information, you are choosing a complete solution. SilverPlatter offers all of the components necessary to provide local, remote, and wide area access to a wide range of electronic information. And that is just the beginning.

Our solutions enable you to easily:

- bring together information resources regardless of location or format
- provide integrated access to core information and electronic full text journals
- facilitate the sharing of research information.

Expand your Digital Library

We bring together premium knowledge-based information resources and progressive technology. We back this with excellent service and support to offer the best solution for creating, maintaining, and expanding your electronic library. And with our ongoing development initiatives, we continue to enhance and expand our solutions to meet your information needs today and tomorrow.

To find out more about our content and technology solutions, stop by our booth #509 at the ACRL Meeting, April 11 -13. Or, call us at 800-343-0064.

Problem: **Limited Resources**

Solution: **Outsource
