

College and University Library Statistics, 1953-54

Fewer libraries return the ACRL
Group I Statistics Questionnaire each year.

Eighty institutions sent in figures for 1953/54 whereas 100 libraries replied in 1949/50. The continuity of reporting by the same institutions is increasing, and this year 64 libraries included in last year's compilation are repeated. Three libraries included in the tabulation a year ago failed to submit reports this year.

Only those institutions are included which report some salary data. This year more libraries submitted this important information although 17 libraries still withheld it for the top administrative positions.

Most librarians indicated that documents were included in the "volumes added" figure only if they were bound and fully cataloged. Only one library indicated a use of the bibliographical method of counting holdings, while two others reported a modified system of both physical and bibliographical methods. A few librarians did not answer the question.

Twenty-one, or 30% of the libraries reporting included serials in the periodical figure. There is apparent difficulty in sorting periodical titles out of a serials records file.

Although the questionnaire stipulated that only students enrolled in the Graduate College be reported as graduate students many libraries obviously included students in professional schools in this figure. Likewise some enrollment figures included extension students while others excluded them. If the statistics are to have any value for comparative purposes, consistency of reporting these statistics is essential.

Additional information was added this year on the length of the work week. Even though the trend seems to be toward a 40 hour 5 day week, it should be pointed out that many public service departments work a 5½ day week. If the non-professional employee's work week differed from the professional, the data for the professional staff were reported. (D.M.B.)

One hundred sixty-two
Groups II and III libraries in Groups II and III reported this year compared with 140 last year, 158 the year before and 142 three years ago. Seventy of the 86 reports received in Group II and 70 of the 76 received in Group III were used in this compilation. Libraries with total operating expenses of \$33,000 or more are included in Group II. Libraries operating with less than that figure are included in Group III.

Medians were determined from the figures appearing without footnotes. Footnotes were omitted wherever possible to permit more numbers to be used in the calculation of the medians. (D.G.)

*Teacher College
Libraries*

Again this year not enough questionnaires were returned by libraries in this group to fill the allotted space. The chairman of the committee made a special effort to increase the number to at least the maximum that could be used, but his efforts failed. On October 11, after the deadline for receipt of completed questionnaires had passed, he sent a reminder to those who had not returned them urging that they be sent in. A few replies that he received to these requests indicate that some librarians feel that they are doing the committee a favor to send in the questionnaire reports. These statistical tables are certainly not compiled for the pleasure of members of the committee. Many expressions over the years have shown that the statistics are very useful to many library administrators. It is to be regretted that there is still a lack of interest on the part of many, however, to the extent that they won't bother to report information about their own libraries. This year's reports fall short of the highest number that has been reported in the past, but represents four more than reported last year. All questionnaires that were received up to November 2 are included in this tabulation. (W.W.S.)
