ABSTRACT

The distribution of the genus *Orobanche* in SE Poland is presented. The study area stretches between the Vistula and the Bug rivers, and comprises the Polish areas of the Lublin-Lwów Upland, the Wołyń Upland and the southern part of Polesie. Eight species of the genus *Orobanche*: *O. alba*, *O. alsatica*, *O. arenaria*, *O. caryophyllacea*, *O. elatior*, *O. lutea*, *O. pallidiflora*, *O. picridis*, were collected during floristic investigations conducted between 1999 and 2010. The hosts, abundance and habitat preferences at the localities are given and a supplemented map of the distribution in SE Poland is included.

KEY WORDS: *Orobanche*, distribution, habitat preferences, host, Lublin-Lwów Upland, Wołyń-Podole Upland, SE Poland.

INTRODUCTION

The genus *Orobanche* L. belonging to the family Orobanchaceae contains species lacking chlorophyll that are holoparasites of other vascular plants. It is one of the most critical genera of the flora in Poland and worldwide, and is notoriously difficult to determine, especially when dry. *Orobanche* species occur mostly in warmer regions of the temperate zone, in particular in the Mediterranean basin. Polish localities are at the northern limit of its range. Approximately 200 *Orobanche* species have been reported worldwide (Pusch and Günther 2009) and ca. 45 taxa are known from Europe (Chater and Webb 1972). Seventeen species of the genus *Orobanche* are known to occur in Poland, including two species considered to be ephemeralophytes (Mądalski 1967; Zająć and Zająć 2001; Halamski 2005; Piwowarczyk 2010a, 2011). Localities of many species of the genus *Orobanche* have not been confirmed for many years. A number of taxa were incorrectly identified, which caused confusion in the dates of their occurrence. *Orobanche* species are rare and threatened with extinction both in Poland and in Europe. As many as eleven species are included in the red list of the vascular plants in Poland (Zarzycki and Szeląg 2006) and two in the

Polish red data book of plants (Zarzycki and Kaźmierczakowa 2001).

In Poland, the taxa are mostly concentrated in the range of xerothermic habitats in the belt of Polish uplands: Śląsk-Kraków Upland, Małopolska Upland, south-eastern uplands, as well as in the lower Oder valley and the Vistula valley (Zająć and Zająć 2001).

A number of new or verified localities of eight species belonging to the genus *Orobanche*, including species endangered in Poland, not confirmed for many years or new to the study area, were recorded during floristic investigations conducted in the south-eastern uplands between 1999 and 2010. The data on occurrence of the species in the area are scarce and scattered. They are often found in the older literature. Descriptions of the localities are often general or fragmentary (e.g. Paczoski 1888; Mądalski 1967; Fijałkowski 1994, 1995; Urban and Łuczyczka-Popiel 1995; Kucharczyk 2001).

THE STUDY AREA

The study area stretches between the Vistula and the Bug rivers. It comprises the Polish areas of the Lublin-Lwów

Upland, Wołyń Upland and the southern part of Polesie. Natural conditions observed in the area are mostly influenced by the geological structure and the climate. The geological structure is formed by rocks of the Cretaceous period with a loess cover deposit. Landforms are diversified and include monadnocks, hills, continental plateaux, closed drainage depressions and valleys, as well as ravined valleys, developed as a result of different resistance levels to erosion of chalky rocks. On the other hand, a dense network of ravines has formed in sites covered with a thicker layer of loesses. The climate is temperate continental: the mean annual precipitation sum is ca. 550 mm and the mean annual temperatures are 7°C. The highest values of maximum air temperature exceed 35°C, the lowest values of minimum air temperatures fall below -30°C. Occurrence of days with frost is limited to period from November to March, sporadically the frosty days are noted in April or October. Length of vegetative period ranges from 211 to 220 days. A relatively high insolation is recorded in the Lublin and the Wołyń uplands (Kaszewski 2008). These conditions are favourable for the occurrence of xerothermic vegetation. Thermophilous species grow on baulks, roadsides and in fallow fields while more typical grasslands develop on steep slopes of river valleys and on chalky outcrops. Grasslands representing Thalictro-Salvietum pratensis or less frequently Koelerio-Festucetum rupicolae, Sisimbrio-Stipetum capillatae, Adonido-Brachypodietum pinnati or Origano-Brachypodietum associations (Festucetalia valesiacae order, Festuco-Brometea class) develop on the loess substrate. Inuletum ensifoliae and its degenerated and succession forms usually occur on calcareous substrate (Fijałkowski 1991).

MATERIAL AND METHODS

The occurrence of species belonging to the genus *Orobanche* in south-eastern Poland in the Polish and Ukrainian uplands province, the Lublin-Lwów and Wołyń-Podole uplands subprovince (Kondracki 2001) is discussed. Investigations were conducted in the following macroregions: Lublin Upland (mesoregions: Middle Vistula Gap, Grabowiec Interfluvies, Zamość Depression, Świdnik Plateau, Giełczew Elevation, Urzędów Heights); Roztocze (Middle Roztocze); Polesie Wołyńskie (Chełm Hills, Dubienka Depression); Wołyń Upland and Małe Polesie (Hrubieszów Basin, Sokal Ridge, Bełz Plain).

Data were collected between 1999 and 2010. Studies were intensified from 2006 to 2009. The list of localities,

Abbreviations:

DG – Działy Grabowieckie (Grabowiec Interfluvies); GS – Grzęda Sokalska (Sokal Ridge); KH – Kotlina Hrubieszowska (Hrubieszów Basin); MPW – Małopolski Przelom Wisły (Middle Vistula Gap); OB – Obniżenie Dubieńskie (Dubienka Depression); PC – Pagóry Chełmskie (Chełm Hills); PI – Przedgórze Ilżeckie (Ilża Foreland); PŚ – Płaskowyż Świdnicki (Świdnik Plateau); PZ – Padół Zamojski (Zamość Depression); RB – Równina Bełska (Bełz Plain); RŚ – Roztocze Środkowe (Middle Roztocze); WG – Wyniosłość Giełczewska (Giełczew Elevation); WS – Wyżyna Sandomierska (Sandomierz Upland); WU – Wzniesienia Urzędowskie (Urzędów Heights).

The herbarium material was deposited in the Herbarium of the Jan Kochanowski University in Kielce (KTC), and in the Herbarium of the Maria Curie-Skłodowska University in Lublin (LBL).

including a full list of published localities and revised herbarium material data, will be published in a monographic study of the genus *Orobanche* in Poland (Piwowarczyk M.Sc.).

The species are arranged alphabetically. Their nomenclature follows Mirek et al. (2002) and syntaxa are distinguished after Matuszkiewicz (2006). The list of species is arranged alphabetically by the abbreviate Polish name of a mesoregion. The location in the ATPOL grid is provided for each locality according to Zajac (1978). Digits that follow letter symbols of the large square are as follows: the two first digits – the number of the 10 km square, two further digits – the number of the 1 km square. The description of each locality contains: the mesoregion (list is given below), location, habitat description, population abundance; the ATPOL grid unit, geographical co-ordinates (using a GPS receiver), revised exsiccatae (the collection date and the collector's name) and the herbarium acronym are given for most localities. Habitats are given for all species and plant associations in which a species was observed are provided for the majority of species. The distribution mapped in 1 km cartogram units according to the ATPOL guidelines (Zajac 1978) based on the localities specified on the list is given for each taxon. Host plants were observed at localities of individual species by delicately exposing the soil.

RESULTS LIST OF SPECIES AND LOCALITIES

I. Orobanche alba Stephan ex Willd.

O. alba prefers insolated S- and SW-facing grasslands, less frequently scrub communities with *Juniperus communis* on shallow chalky rendzinas. It is mostly recorded in plant associations difficult to classify that form a mosaic of species belonging to the Cirsio-Brachypodion pinnati alliance and the Trifolio-Geranietea sanguinei class. It flowers from mid June to mid July. *Salvia verticillata* is the host of *O. alba* in the study area (Fig. 1).

List of localities: DG: 1. Dworzyska – the steep SW-facing slope of the Wieprz valley, Thalictro-Salvietum pratensis grassland developing on loess substrate (>10), GE6211, 50°55'45"N, 23°09'53"E, leg. A. Cwener & M. Wrzesień, 17.07.2006 (LBL), leg. A. Cwener, 24.06.2007 (LBL); 2. Żmudź – by the SW border of the complex of forested xerothermic grasslands neighbouring on the “Żmudź” reserve (<5), GE5507, 51°00'16"N, 23°40'01"E, vid. P. Chmielewski, 2007; 3. Wólka Leszczańska – two populations: the first is situated in a narrow belt of calcareous xerothermic grassland belonging to the Cirsio-Brachypodion pinnati alliance between the “Żmudź” reserve and the Wólka Leszczańska village (>20), the second is located in a midfield patch of juniper scrub with fringe vegetation of the Trifolio-Geranietea sanguinei class between Wólka Leszczańska and Kolonia Mazichernia villages (>5), GE4596, GE5506, GE5515, 51°00'36"N, 23°39'10"E, 50°59'55"N, 23°38'16"E, leg. P. Chmielewski, 2007, leg. R. Piwowarczyk, 08.06.2007 (KTC); 4. Kolonia Leszczany – thermophilous juniper scrub and fringe communities in the vicinity of the forest complex overgrowing the western slope of a calcareous hill known as Kurawica (>40), GE5512, 51°00'19"N, 23°35'41"E,

vid. A. Cwener, P. Chmielewski & R. Piwowarczyk, 2007, leg. P. Chmielewski & R. Piwowarczyk, 2007 (KTC). **5.** Leszczany – a fallow field near a former limestone excavation pit by the Żmudź – Kumów Majoracki road (<5). The species disappeared after the fallow field had been ploughed. GE4591, 51°01'28"N, 23°34'53"E, leg. P. Chmielewski & R. Piwowarczyk, 15.07.2006 (KTC); **6.** Kumów Majoracki – loose juniper scrub and fringe communities on the western calcareous slope of a small water course flowing into the Krzywółka river, on the edge of the “Płachsiucha” forest complex (>10), GE4499, 51°01'18"N, 23°33'03"E, vid. P. Chmielewski, 01.07.2007. **7.** Huszczka Duża – grasslands of the Inuletum ensifoliae association situated on a vast calcareous slope with glades with xerothermic vegetation (>50), GE6393, GE7303, 50°50'40"N, 23°18'54"E, vid. A. Cwener, 2006 (LBL); **8.** Białowody – a xerothermic grassland of the Cirsio-Brachypodion pinnati alliance on a calcareous slope, ca. 400 m E of a dirt road from Grabowiec to Uchanie (>30), GE6554, 50°52'34"N, 23°36'51"E, vid. P. Chmielewski, 27.06.2008; **9.** Skomorochy Małe – a xerothermic grassland of the Cirsio-Brachypodion pinnati alliance, on the calcareous slope of the Wolica valley, ca. 400 m E of the village buildings (>20), GE6498, 50°50'21"N, 23°31'01"E, vid. P. Chmielewski, 01.07.2007; **10.** Grabowiec–Góra – a xerothermic grassland forested with ashes and larches on the “Wzgórze Zamkowe” hill, by the gravel road from Grabowiec to Bronisławka (<10), GE7521, 50°49'01"N, 23°33'37"E, vid. P. Chmielewski, 01.07.2007; **GS:** **11.** Komarów-Wieś – a xerothermic grassland on the calcareous slope of a dry small valley joining the Sieniocha river valley, ca. 200 m E of the buildings in the Brzęczyna settlement (>30), GE9445, 50°37'03"N, 23°27'26"E, vid. P. Chmielewski, 2007; **12.** Kraczew – a calcareous slope, ca. 200 m E of the village buildings (>20), GE9563, 50°35'51"N, 23°34'05"E, vid. W. Michalczuk, 2007, leg. R. Piwowarczyk, 2007 (KTC); **KH:** **13.** Gródek (Czumów) – xero-

thermic grasslands on high midfield baulks (western slopes of an old earthwork in Gródek) (>15), GE7719, 50°47'46"N, 23°57'11"E, leg. A. Cwener, 28.08.2007 (LBL); **MPW:** **14.** Męćmierz – xerothermic grasslands and fallow fields situated on a calcareous hill, ca. 300 m SW of village buildings (<50), FE2322, 51°18'25"N, 21°54'28"E, leg. P. Chmielewski & R. Piwowarczyk, 23.08.2008 (KTC); **PC:** **15.** Brzeźno near Chełm – calcareous elevations surrounded by meadows, of the village in the “Brzeźno” peat bog reserve (>50), GE3540, 51°09'18"N, 23°35'31"E, leg. J. Wójciak & R. Piwowarczyk, 12.07.2008 (KTC); **PZ:** **16.** Kąty II – xerothermic grasslands situated on a midfield hill known as Wieprzecka Góra (>20), GE8291, 50°40'37"N, 23°07'31"E, leg. R. Piwowarczyk, W. Michalczuk & P. Chmielewski, 13.07.2008 (KTC); **RB:** **17.** Kolonia Jarczów II – xerothermic grasslands and fringe communities situated in the southern part of two forest complexes located ca 1 km S of the village buildings (>20), GF1573, GF1574, 50°24'14"N, 23°34'24"E; 50°24'10"N, 23°33'06"E, vid. P. Chmielewski & R. Piwowarczyk, 13.07.2006; **18.** Machnów Stary – xerothermic grasslands in the “Machnowska Góra” reserve (>50), GF2515, 50°22'10"N, 23°35'20"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **19.** Korhynie – xerothermic grasslands with juniper and fringe communities in the “Korhynie” ecological site, ca. 300 m E of the village buildings (<10), GF1572, 50°24'19"N, 23°32'31"E, vid. A. Cwener & P. Chmielewski, 28.07.2009; **RŚ:** **20.** Przeorsk – a xerothermic grassland on the slopes of a hill known as Łysa Góra (>30), GF1550, 50°25'22"N, 23°31'01"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **WG:** **21.** Bryczówka – fringe communities on the slope of a calcareous ravine, ca. 100 m from the village buildings (5), GE6165, 50°52'55"N, 23°03'09"E, vid. P. Chmielewski, 01.08.2009.

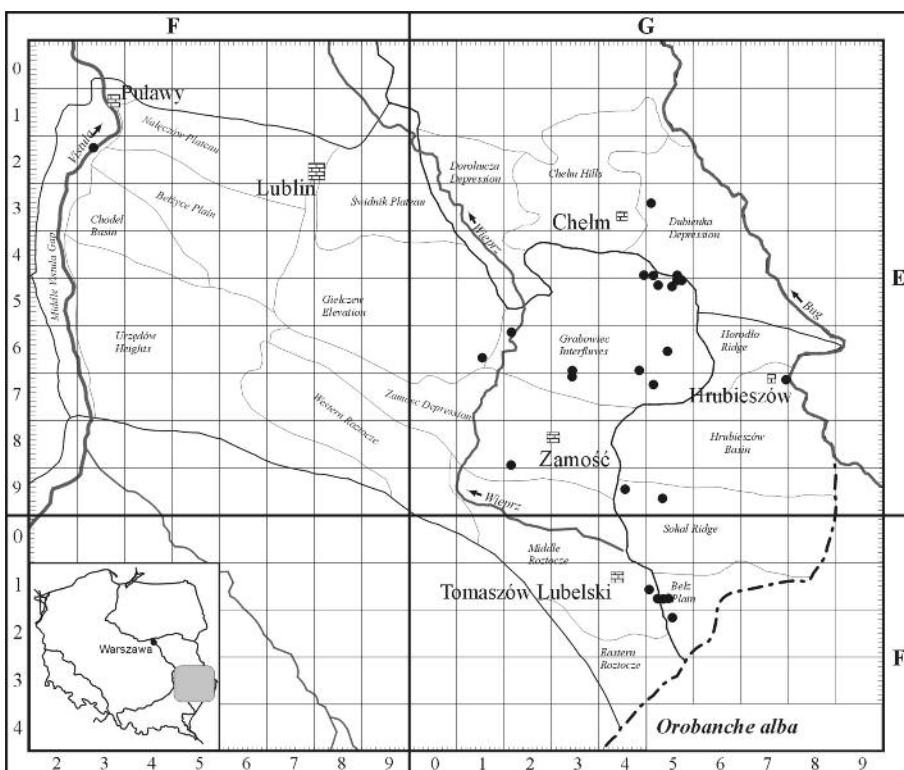

Fig. 1. Distribution of *Orobanche alba* in SE Poland.

II. *Orobanche alsatica* Kirschl.

The species prefers warm hazel scrub of the Peucedano cervariae-Coryletum association and xerothermic oak forests of the Potentillo albae-Quercetum association, on shallow chalky rendzinas. It is rarely recorded in open xerothermic grasslands of the Cirsio-Brachypodion pinnati alliance. Numerous populations of the species are rare and its abundance may fluctuate from one year to another. It flowers in June and July. *Peucedanum cervaria* is the host of *O. alsatica* in the study area (Fig. 2).

List of localities: **DG:** 1. Orlów Murowany – forest complex, Peucedano cervariae-Coryletum association, on the slope of a calcareous hill, ca. 1 km E of the village (<10), GE6238, 50°54'26"N, 23°14'26"E, leg. P. Chmielewski & R. Piwowarczyk, 11.07.2008 (KTC); 2. Broczówka – SW-facing slopes on chalky rendzinias in the Inuletum ensifoliae association with accompanying Peucedano cervariae-Coryletum scrub, in the steppe “Broczówka” reserve, ca. 1.5 km N of Skierbieszów (<100), GE6377, 50°52'05"N, 23°22'05"E, leg. R. Piwowarczyk, W. Michalczuk & P. Chmielewski, 08.06.2005 (KTC); leg. A. Cwener, 2006 (LBL), leg. R. Piwowarczyk, 15.07.2006 (KTC); 3. Czechówka – an overgrowing Inuletum ensifoliae xerothermic grassland on chalk and Peucedano cervariae-Coryletum scrub, in a midforest glade in the forest complex by the Grabowiec – Wojsławice road (<50), GE6489, 50°51'17"N, 23°32'08"E, leg. A. Cwener, 02.07.2006, (LBL); **OB:** 4. Horeszkowice – a midforest glade, ca. 3 km SE of the buildings in the village, in the vast Lasy Strzeleckie forest complex, in Peucedano cervariae-Coryletum scrub in oak-hornbeam and swamp forests (<30), GE5679, 50°56'21"N, 23°49'28"E, leg. J. Wójciak & R. Piwowarczyk, 12.07.2008 (KTC); **PC:** 5. Wolwinów – “Wolwinów” reserve, near the entry to Chełm, by the Hrubieszów – Chełm road. One specimen was recorded here in 2007 among the vegetation of the Peucedano cervariae-Coryletum association, GE3486,

51°06'59"N, 23°30'49"E, vid. R. Piwowarczyk & P. Chmielewski, 08.06.2007 (KTC); **PZ:** 6. Kąty II – a mid-field hill known as Wieprzecka Góra, in Peucedano cervariae-Coryletum scrub, on chalky rendzina (<20), GE8291, 50°40'33"N, 23°07'22"E, leg. R. Piwowarczyk, W. Michalczuk & P. Chmielewski, 13.07.2006 (KTC); 7. Dąbrowa near Łabunie – “Łabunie” reserve in a glade on the forest edge, ca. 1 km SE of the village buildings, scrub of the Peucedano cervariae-Coryletum association and in the thermophilous oak forest (Potentillo albae-Quercetum), on chalky rendzina (<30), GE9402, 50°39'10"N, 23°24'56"E, leg. P. Chmielewski & R. Piwowarczyk, 12.07.2007, 13.07.2008 (KTC); **RŚ:** 8. Majdanek – between Majdan Górnny and Justynówka villages, on the S- and SW-facing vast calcareous slope of the “Biała Góra” ecological site, in the vegetation of the Peucedano cervariae-Coryletum association and fringe communities of the Trifolio-Geranietea sanguinei class (<50), GF1407, 50°28'33"N, 23°28'44"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2006 (KTC), leg. R. Piwowarczyk, 28.06.2008 (KTC).

III. *Orobanche arenaria* Borkh.

The species is very rare in Poland, it has so far been confirmed or reported as occurring at only four localities: in Lower Silesia (Szczęśniak 2003) and in the Niecka Nidziańska basin (Piwowarczyk and Przemyski 2010). It was recorded at one locality in the Middle Vistula Gap in the study area (Fig. 2). It flowers at the end of June and the beginning of July. It parasitizes *Artemisia campestris*.

List of localities: **MPW:** Męćmierz – the N and NE-facing slope of a small dry valley, ca. 1.5 km SW of the village, a fallow field with dominant vegetation of the class Artemisieta vulgaris (>100), FE2323, 51°18'07"N, 21°53'54"E, vid. P. Chmielewski, 22.04.2009, leg. R. Piwowarczyk, 26.07.2009 (KTC).

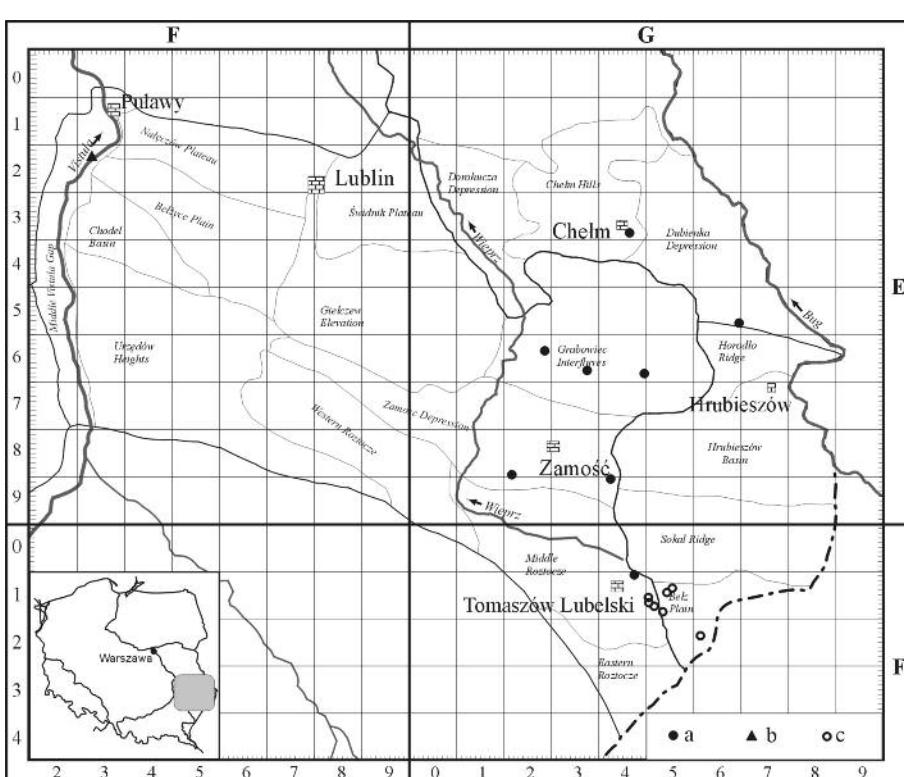

Fig. 2. Distribution of: a – *Orobanche alsatica*, b – *O. arenaria*, c – *O. pallidiflora* in SE Poland.

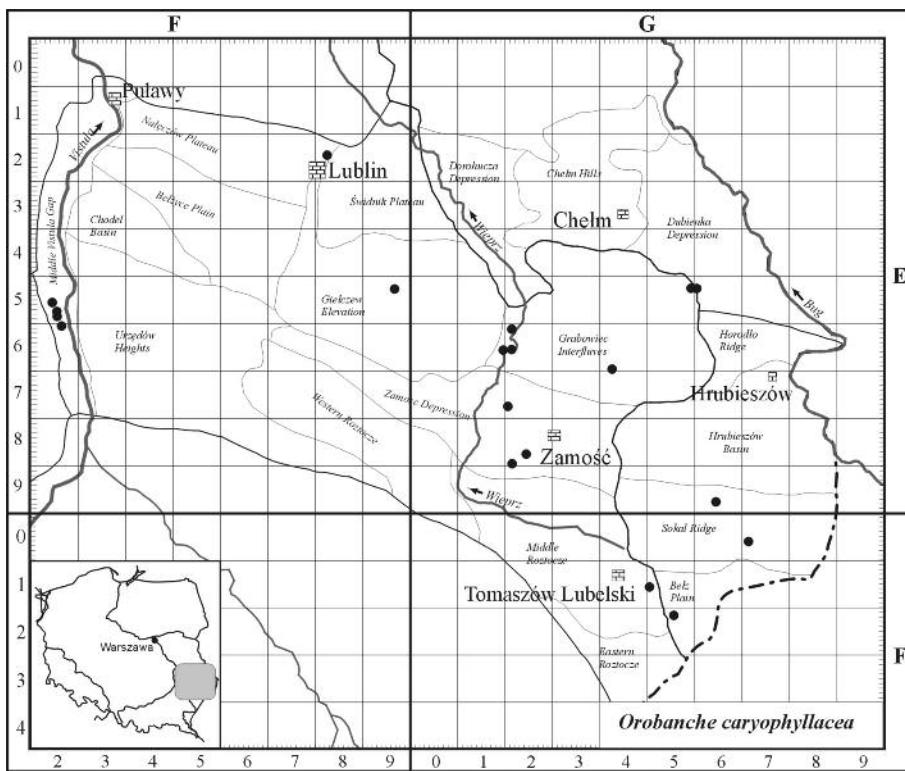

Fig. 3. Distribution of *Orobanche caryophyllacea* in SE Poland.

IV. *Orobanche caryophyllacea* Sm.

The species is recorded on sun-exposed slopes on calcareous or loess substrate. It prefers open sites where it colonizes xerothermic grasslands of Cirsio-Brachypodium pinnati alliance. It rarely forms larger populations. It flowers from May until the end of June. It parasitizes *Galium mollugo* and sporadically *G. verum* (Fig. 3).

List of localities: **DG:** 1. Tarnogóra – grasslands belonging to Thalictro-Salvietum pratensis association in the escarpment complex in the Wieprz valley (>15), GE6159, GE6251, 50°53'47"N, 23°07'10"E, leg. A. Cwener, 24.06.2008 (LBL); 2. Hajowniki (Reforma) – xerothermic grasslands and scrubs on the chalky slope of the Wolica river, on the northern side of the Skierbieszów – Grabowiec road (>50), GE6492, 50°50'26"N, 23°26'35"E, leg. A. Cwener, 22.06.2007 (LBL); 3. Kolonia Teresin – xerothermic grasslands and roadsides on chalky rendzinas on a hill ca 0.5 km S of the village (>50), GE5529, GE5620, 50°59'21"N, 23°41'56"E; 50°59'14"N, 23°42'20"E; 50°59'20"N, 23°41'30"E; 50°59'00"N, 23°40'46"E, vid. P. Chmielewski, A. Cwener & R. Krawczyk, 2005, leg. P. Chmielewski & R. Piwowarczyk, 15.07.2006 (KTC); 4. Dworzyska – E-facing steep slopes of the Wieprz valley, an overgrowing Thalictro-Salvietum pratensis grassland (<20), GE6211, 50°55'47"N, 23°08'38"E, leg. A. Cwener, 09.06.2008 (LBL); **GS:** 5. Dobużek – "Skarpa Dobużanka" reserve, ca. 1 km NW of the Dobużek village, on the steep slope of the Huczwa river valley, xerothermic grasslands belonging to Thalictro-Salvietum pratensis association, on chalky rendzina and chernozems (>50), GE9674, 50°34'50"N, 23°42'55"E, leg. P. Chmielewski & R. Piwowarczyk, 12.07.2006 (KTC); 6. Posadów – xerothermic grassland on embankments of an early medieval earthwork, on the edge of the Kamionka river valley, ca. 0.5 km N of the village (>30), GF0751, 50°30'27"N, 23°48'57"E, vid. E. Gorgol & P. Chmielewski, 24.05.2009; **MPW:** 7. Ciszyca Kolonia – a xerothermic grassland on chalky ren-

dzina, belonging to Cirsio-Brachypodium pinnati alliance, and in thermophilous scrub of the Trifolio-Geranietea sanguinei and Rhamno-Prunetea classes on the slope of the Vistula valley, W of the road to Ciszyca Góra (>100), FE5254, 51°01'14"N, 21°46'41"E, vid. R. Piwowarczyk, 2000-2008; leg. R. Piwowarczyk, 2000, 2006 (KTC), [the species also grows along a valley border in the PI (Piwowarczyk 2010b)]; 8. Dorotka – xerothermic grasslands and scrub on the slopes of the Vistula valley (>30), FE5275, FE5285, 50°59'57"N, 21°47'09"E, vid. R. Piwowarczyk, 2000-2007; leg. R. Piwowarczyk, 18.06.2006 (KTC), [the species also grows along a valley border in the PI (Piwowarczyk 2010b)]; 9. Wesołówka – the border between the Middle Vistula Gap and the Ilża Foreland (Bróż et al. 2001; Piwowarczyk 2006, 2010b), in the SE part of the village, called "Modrzywka" by local residents, xerothermic grasslands and fallows fields on chalky rendzina (>15), FE6206, 50°58'37"N, 21°47'49"E, vid. R. Piwowarczyk, 1999-2006; leg. R. Piwowarczyk, 2006 (KTC). The species did not occur in the period 2008-2010; **PŚ:** 10. Lublin – a grassland belonging to Thalictro-Salvietum pratensis association on a high baulk on the slope of the Bystrzyca valley (>10), FE2842, 51°16'23"N, 22°37'57"E, leg. A. Rysiak, 2006 (LBL); **PZ:** 11. Złojec – a xerothermic grassland belonging to Thalictro-Salvietum pratensis association on a midforest hill in the Łabuńka river valley, ca. 300 m N of the village church (>30), GE7270, 50°46'55"N, 23°07'12"E, vid. W. Michalcuk 17.06.2006; 12. Kąty II – xerothermic grasslands adjacent to a dirt road from the Wymysłówka village to Wychody, on a midfield hill known as Wieprzecka Góra (>50), GE8291, 50°40'22"N, 23°07'22"E, leg. R. Piwowarczyk, W. Michalcuk & P. Chmielewski, 15.07.2006 (KTC); 13. Hubale – xerothermic grassland on a calcareous hill, ca. 0.5 km N of the village (>15). The locality was partly damaged by ploughing in 2009. GE8274, 50°41'07"N, 23°09'47"E, vid. W. Michalcuk, 2007; **RB:** 14. Machnów

Stary – overgrowing xerothermic grasslands in the “Machnowska Góra” reserve (>10), GF2515, 50°22'06"N, 23°35'18"E, vid. P. Chmielewski & R. Piwowarczyk, 13.07.2006; **RŚ: 15.** Przeorsk – xerothermic grassland on the Łysa Góra hillside and on the bottom of a dry small valley joining the Sołokija river (>50), GF1550, 50°25'27"N, 23°31'06"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **WG: 16.** Kolonia Żuków near Krzczonów – a partly forested xerothermic grassland near a closed limestone quarry. The site is protected as part of the “Kamienny Wąwoz” nature and landscape complex (>5), FE5926, 51°02'15"N, 22°47'40"E, vid. P. Chmielewski, 17.08.2009.

V. *Orobanche elatior* Sutton

The species is recorded in highly sun-exposed xerothermic and mesoxerothermic grasslands, on baulks and roadsides and the edges of arable lands, on shallow chalky rendzinas and loess, less frequently on chernozems. It prefers grasslands belonging to Thalictro-Salvietum pratensis and Inuletum ensifoliae associations and initial calcareous communities. It rarely forms larger populations. It flowers from June to early August (September). *Centaura scabiosa* is the host of *O. elatior* (Fig. 4).

List of localities: **DG: 1.** Żmudź – xerothermic grasslands and scrub in the “Żmudź” reserve and along its borders, ca. 0.5 km W of Kolonia Żmudź (>10), GE5508, 51°00'29"N, 23°40'27"E, leg. R. Piwowarczyk & P. Chmielewski, 08.06.2007 (KTC); **2.** Wólka Leszczańska – a narrow belt of xerothermic grasslands between the “Żmudź” reserve and the village (>5), GE4595, 51°00'41"N, 23°39'09"E, leg. P. Chmielewski & R. Piwowarczyk, 08.06.2008 (KTC); **3.** Podlesie – a xerothermic grassland and blackthorn scrub, ca. 1 km S of Wólka Leszczańska (>20), GE5516, 51°00'03"N, 23°39'03"E, vid. P. Chmielewski, 2007; **4.** Leszczany – a fallow field and an arable field adjacent to a former

limestone excavation pit, by the Żmudź – Kumów Majorecki road, near village buildings (<50). Some specimens were deformed, probably following treatment with weed killers. GE4591, 51°01'29"N, 23°34'53"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **5.** Huszczka Duża – xerothermic grasslands belonging to Inuletum ensifoliae association and in communities with *Brachypodium pinnatum*, on a vast calcareous slope (<15), GE7304, 50°50'10"N, 23°19'11"E, leg. A. Cwener, 30.06.2006 (LBL); **6.** Wolica Uchańska – a xerothermic grassland and a fallow field on cretaceous rendzina on a W-, SW- and S-facing slope, by the Skierbieszów – Grabowiec road, immediately behind Wolica Uchańska (>30), GE7416, 50°49'36"N, 23°29'29"E, leg. A. Cwener, 27.07.2006 (LBL), vid. P. Chmielewski, 2008; **7.** Kolonia Łaziska – a degraded xerothermic grassland on a S- and SW-facing slope, ca. 400 m E of the village (>20), GE7430, 50°48'42"N, 23°24'05"E, leg. A. Cwener, 29.05.2005, vid. P. Chmielewski, 2007; **8.** Kolonia Teresin – roadsides, fallow fields, xerothermic grasslands and loose blackthorn scrub on a vast calcareous scrub ca. 0.5 km S of the village (>30), GE5529, GE5539, GE5620, GE5630, 50°59'41"N, 23°40'54"E; 50°58'43"N, 23°41'57"E; 50°59'19"N, 23°41'29"E; 50°58'49"N, 23°42'09"E; 50°59'01"N, 23°41'11"E; 50°58'46"N, 23°41'25"E; 50°59'20"N, 23°42'00"E, leg. P. Chmielewski & R. Piwowarczyk, 08.06.2007 (KTC); **9.** Tarnogóra – xerothermic grassland of Thalictro-Salvietum pratensis association on a loess slope (>5), GE6240, 50°53'42"N, 23°08'09"E, vid. A. Cwener, 2007; **10.** Turowiec – a vast complex of initial xerothermic grasslands and juniper scrub, ca. 1.5 km N of the cemetery near Turowiec – Popówka villages (<5), GE5556, 50°58'00"N, 23°38'12"E, vid. P. Chmielewski 2007, **11.** Rogów – xerothermic grasslands belonging to Inuletum ensifoliae association in the “Rogów” reserve, on the calcareous slope of a water course, ca. 1 km SE of the village (>20), GE7424, 50°47'52"N, 23°31'28"E, leg. A.

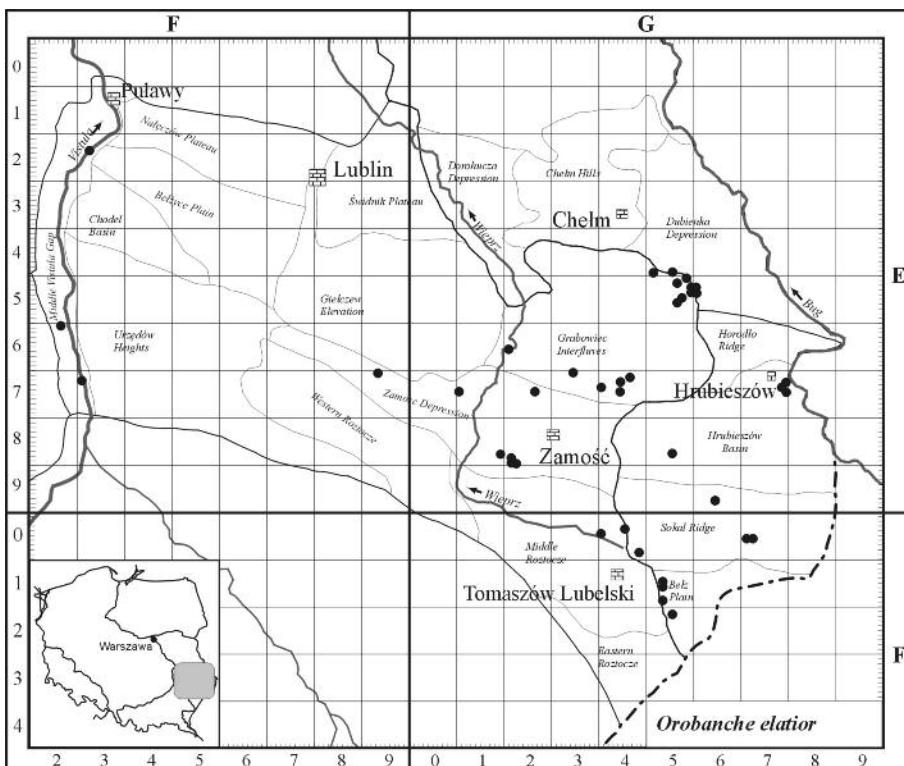

Fig. 4. Distribution of *Orobanche elatior* in SE Poland.

Cwener, 02.07.2006 (LBL); **12.** Żuków – a degraded xerothermic grassland on a cretaceous slope (>20), GE7444, 50°47'51"N, 23°28'09"E, leg. A. Cwener, 20.07.2006 (LBL); **13.** Maziarnia – roadsides on the edge of a forested xerothermic scrub complex, ca. 300 m S of Maziarnia near Putnowice (>20), GE5547, 50°58'32"N, 23°39'13"E, vid. P. Chmielewski, 25.04.2009; **GS:** **14.** Posadów – xerothermic grasslands belonging to *Thalictro-Salvietum pratensis* association, on cretaceous rendzina and chernozems, 0.5 km N of the village, on the edge of the Kamionka river valley, on both sides of the road to Telatyn (>30), GF0751, GF0752, 50°30'27"N, 23°48'57"E; 50°30'14"N, 23°49'18"E, vid. P. Chmielewski, 2006; **15.** Dobużek – "Skarpa Dobużańska" reserve, ca. 1 km NW of the village, a xerothermic grassland belonging to *Thalictro-Salvietum pratensis* association on the steep slope of the Huczwa river valley (>20), GE9674, 50°34'50"N, 23°42'56"E, leg. P. Chmielewski & R. Piwowarczyk, 14.07.2006 (KTC); **16.** Przecinka – xerothermic grassland on a chalky hillside (Góra Kamienna), between Przecinka and Justynówka villages (>20), GF0488, 50°29'22"N, 23°29'37"E, vid. P. Chmielewski, 15.06.2008; **KH:** **17.** Kazimierówka – the side of the road from the Kotlice village towards Perespa, ca. 300 m S of the Kotlice Forest. Over ten specimens of *O. elatior* were recorded in 2007; the species was not observed afterwards although the habitat did not change. GE8575, 50°40'35"N, 23°36'27"E, vid. P. Chmielewski, 2007; **18.** Gródek – xerothermic grasslands on the slopes of the Bug valley stretching from the Kolonia Gródek village towards Czumów (>50), GE7729, GE7738, GE7749, 50°47'46"N, 23°57'11"E; 50°46'57"N, 23°56'47"E, leg. P. Chmielewski & A. Cwener, 28.06.2008; **MPW:** **19.** Opoka Duża – a fallow field bordering on the steep slopes of the Vistula valley, overgrown with dense thermophilous scrub, ca. 1 km NW of the village (<5), FE7310, 50°51'58"N, 21°51'23"E, vid. P. Chmielewski, 14.04.2009; **20.** Wesółówka near Tarłów, the borderline between MPW and PI (Piwowarczyk 2006, 2010b) – fallow fields, baulks and xerothermic grasslands along the edge of the Vistula valley, in the part of the village known as "Modrzywka" (>30), FE6206, 50°58'41"N, 21°47'47"E, vid. R. Piwowarczyk, 1999-2010; leg. R. Piwowarczyk, 29.06.2005 (KTC); **21.** Męćmierz – xerothermic grassland on the slopes of a vast ravine (one specimen), FE2321, 51°18'07"N, 21°54'02"E, vid. P. Chmielewski & R. Piwowarczyk, 26.07.2009; **PZ:** **22.** Niedzielska – fringe communities on the edge of a juniper scrub complex, ca. 700 m S of the village buildings (one specimen), GE8179, 50°42'00"N, 23°04'53"E, vid. A. Cwener & P. Chmielewski, 28.07.2009; **23.** Elizówka – midfield initial xerothermic grasslands and scrub on hillsides, ca. 0.5 km of the village buildings (two specimens), FE7903, 50°51'37"N, 22°44'07"E, vid. P. Chmielewski & R. Piwowarczyk, 2008; **24.** Gruszka Duża – a narrow belt of a xerothermic grassland by the roadside, ca. 1 km N of the village (>15), GE7140, 50°49'10"N, 22°58'41"E, vid. P. Chmielewski, 2008; **25.** Chomęciska Małe – a xerothermic grassland on a hillside, ca. 0.5 km SE of the village buildings, at an intersection of field roads (<5), GE7247, 50°48'26"N, 23°12'34"E, vid. P. Chmielewski & R. Piwowarczyk, 09.06.2007; **26.** Kąty II – initial xerothermic grasslands near a dirt road from the Wymysłówka village to Wychody, on a midfield hill known as Wieprzecka Góra

(<20), GE8281, GE8291, GE8292, 50°40'46"N, 23°07'35"E; 50°40'35"N, 23°07'43"E, vid. R. Piwowarczyk, W. Michalczuk & P. Chmielewski, 2006; **RB:** **27.** Kolonia Korhynie – a fallow field on chalky rendzina, in the W part of the village. The locality was destroyed by ploughing in the spring 2010. GF1553, 50°25'41"N, 23°33'02"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2008 (KTC); **28.** Kolonia Jarczów I – a fallow field in the W part of the village, by the road running S towards the Kolonia Korhynie village (<10), GF1543, 50°26'03"N, 23°33'46"E, vid. P. Chmielewski, 2008; **29.** Żurawce – an initial xerothermic grassland near the "Żurawce" ecological site, on the slope of the Sołokija valley (>20), GF1583, 50°23'33"N, 23°33'35"E, vid. P. Chmielewski, 2007; **30.** Machnów Stary – xerothermic grasslands in the "Machnowska Góra" reserve (>30), GF2515, 50°22'10"N, 23°35'21"E; 50°22'17"N, 23°34'54"E, vid. P. Chmielewski, 2007; **RŚ:** **31.** Tarnawatka-Tartak – fallow fields and the roadside of a field road over the hill from Tarnawatka S towards the Pańków village (>20), GF0440, 50°31'28"N, 23°29'37"E, vid. P. Chmielewski, 27.07.2007, **32.** Huta Tarnawacka – an initial xerothermic grassland on the SW and S hillsides, ca. 0.5 km N of the village, by a dirt road towards the Pauczno village (>50), GF0435, 50°32'05"N, 23°29'37"E, vid. P. Chmielewski, 14.07.2006.

VI. *Orobanche lutea* Baumg.

O. lutea prefers xerothermic grasslands, fringe communities and fallow fields, mostly on shallow chalky rendzinias. It accompanies communities belonging to the *Cirsio-Brachypodion pinnati* alliance, the *Trifolio-Geranietea sanguinei* and *Rhamno-Prunetea* classes, where it often forms very large populations. It is sporadically recorded in *Sisymbrio-Stipetum capillatae*. It flowers in May and June. The species parasitizes *Medicago falcata*, sporadically also *M. sativa*. It is mostly recorded among species of the genus *Orobanche* in the study area (Fig. 5).

List of localities: **DG:** **1.** Żmudź – initial xerothermic grasslands and scrub in the "Żmudź" reserve, ca. 0.5 km W of Kolonia Żmudź (>200), GE4597, 51°00'33"N, 23°40'26"E, leg. R. Piwowarczyk & P. Chmielewski, 08.06.2007 (KTC); **2.** Wólka Leszczańska – a xerothermic grassland between the "Żmudź" reserve and Wólka Leszczańska (>15), GE4595, 51°00'40"N, 23°39'09"E, leg. P. Chmielewski & R. Piwowarczyk, 08.06.2007 (KTC); **3.** Kolonia Leszczany – thermophilous juniper scrub and fringe communities near the forest complex growing on the W slope of the Kurawica hill (<50), GE5512, 51°00'17"N, 23°35'44"E, leg. A. Cwener, P. Chmielewski & R. Piwowarczyk, 13.07.2007 (KTC); **4.** Hajowniki – a degraded xerothermic grassland on the loess slope of the Wolica river valley, on the S side of the Skierbieszów – Grabowiec road, ca. 1 km before village buildings in Hajowniki (>20), GE7402, 50°50'16"N, 23°25'50"E, vid. P. Chmielewski, 10.05.2008; **5.** Kolonia Teresin – fallow fields and mesoxerothermic grasslands on a vast hill, located ca. 0.5 km S of the village (>20), GE5539, GE5620, GE5630, 50°59'21"N, 23°41'58"E; 50°59'04"N, 23°41'09"E; 50°58'48"N, 23°42'00"E, leg. P. Chmielewski, 2007; **6.** Kolonia Wygnańce – the roadside in the N part, in a juniper scrub complex (>10), GE5553, 50°58'13"N, 23°36'14"E, vid. P. Chmielewski, 2008; **7.** Turowiec – initial xerothermic grasslands and juniper

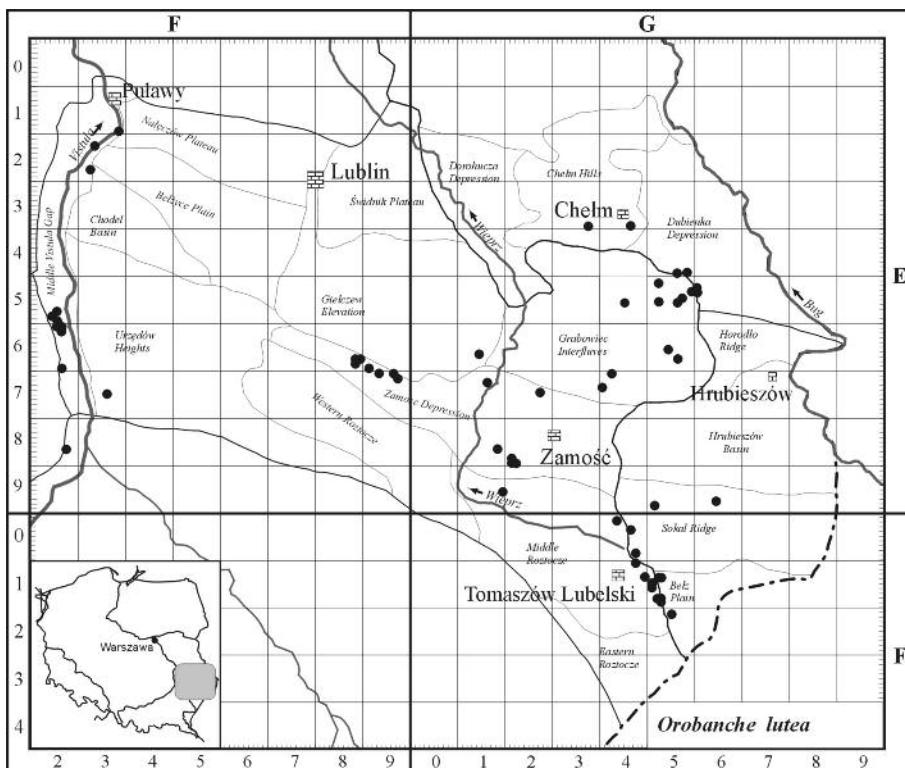

Fig. 5. Distribution of *Orobanche lutea* in SE Poland.

scrub, ca. 1.5 km N of the cemetery near Turowiec – Popówka villages (<5), GE5556, 50°58'03"N, 23°38'10"E, vid. P. Chmielewski, 25.04.2009; **8.** Maziarnia – forested complex of xerothermic grasslands and scrub, ca. 300 m S of the village (>10), GE5547, 50°58'31"N, 23°39'20"E, vid. P. Chmielewski, 04.07.2009; **9.** Nowy Folwark – xerothermic grassland, ca. 1.5 km E of the village (>5), GE5465, 50°57'36"N, 23°29'26"E, vid. P. Chmielewski, 17.07.2009; **10.** Kolonia Łaziska – degraded xerothermic grassland on a S- and SW-facing hillside, ca. 400 m E of the village (>10), GE7430, 50°48'42"N, 23°24'00", leg. A. Cwener, 29.07.06 (LBL); **11.** Białowody – a xerothermic grassland on a hillside, ca. 400 m E of the Grabowiec – Uchanie road (>10), GE6554, 50°52'34"N, 23°36'52"E, vid. P. Chmielewski, 2008; **12.** Gliniska – xerothermic grasslands and blackthorn scrub in the “Gliniska” reserve and on the calcareous slope of the Kalinówka river (<50), GE6576, 50°51'30"N, 23°38'12"E; 50°51'22"N, 23°38'04"E, vid. P. Chmielewski, 2008; **GS:** **13.** Huta Tarnawacka – a fringe community on the S border of a small forest complex located ca. 300 m N of the village buildings (>10), GF0436, 50°32'06"N, 23°27'23"E, leg. P. Chmielewski, 2006, **14.** Dobużek – xerothermic grasslands in the “Skarpa Dobużańska” reserve ca. 1 km NW of the village, on the steep slope of the Huczwa river valley, on chalky rendzina and chernozems (>200), GE9674, 50°34'49"N, 23°42'44"E, leg. P. Chmielewski & R. Piwowarczyk, 2008 (KTC); **15.** Kozia Wola near Wożuczyn – a xerothermic grassland on the slope of a water course valley flowing into the Rachanka river, ca. 1 km NW of the village buildings (>15), GE9581, 50°34'41"N, 23°32'46"E, vid. P. Chmielewski, 2007; **16.** Przecinka – xerothermic grasslands, roadsides and fringe communities on the forest edge, ca. 300 m N of the W border of the Justynówka village (>30), GF0487, 50°29'15"N, 23°28'23"E, vid. P. Chmielewski, 2007; **MPW:** **17.** Bochotnica – xerothermic grasslands and scrub on a calcareous escarp-

ment, ca. 150 m NE of the school building (>30), FE1398, 51°20'28"N, 21°59'52"E, leg. P. Chmielewski & R. Piwowarczyk, 23.08.2008 (KTC); **18.** Męćmierz – xerothermic grasslands and fallow fields on a hill, ca. 300 m SW of the village buildings (>30), FE2323, 51°18'25"N, 21°54'28"E, leg. P. Chmielewski & R. Piwowarczyk, 23.08.2008 (KTC); **19.** Dobre – xerothermic grassland and a fallow field on the S side of the Kazimierz Dolny – Dobre road, ca. 0.5 km from the village buildings (>5), FE2372, 51°16'08"N, 21°54'34"E, leg. P. Chmielewski & R. Piwowarczyk, 23.08.2008 (KTC); **20.** Dorotka – xerothermic grasslands and scrub as well as fallow fields and roadsides in the S and SE part of the village, along the edge and on the slopes of the Vistula valley, by a field road towards Sulejów (<200), FE5275, 50°59'56"N, 21°47'11"E, vid. R. Piwowarczyk, 2000 – 2008, leg. R. Piwowarczyk, 01.06.2002 (KTC), [the species also grows along a valley border in the PI (Piwowarczyk 2010b)]; **21.** Wesołówka – xerothermic grasslands, thermophilous scrub, ecotone zones with arable and fallow fields on chalky rendzina, along the edge and on the slopes of the Vistula valley, on the border with the PI (Piwowarczyk 2006, 2010b), in the NE part of the village, towards Sulejów (<400), FE6205, FE6206, FE6216, 50°58'49"N, 21°47'47"E; 50°58'56"N, 47°38'73"E; 50°58'27"N, 21°47'48"E, vid. R. Piwowarczyk, 1999-2009, leg. R. Piwowarczyk, 1999, 2008 (KTC); **22.** Sulejów – xerothermic grasslands with numerous juniper plants, in thermophilous scrub, on baulks and sides of field roads on chalky rendzina, on the edge and the slopes of the Vistula valley, in the N and S part of the village (<100), FE5284, FE5295, 50°58'57"N, 21°47'47"E; 50°59'13"N, 21°47'41"E, vid. R. Piwowarczyk, 2000-2008, leg. R. Piwowarczyk, 2000, 2007 (KTC); **23.** Biedrzychów – the edge of a fallow field and thermophilous scrub on chalky rendzina, N of the road to Lasocin (>10), FE6296, 50°54'05"N, 21°47'13"E, leg. R. Piwowarczyk, 2008

(KTC); **24.** Słupcza – on the border with WS, xerothermic grassland on loess belonging to *Sisymbrio-Stipetum capillatae* association, on the S-facing slope of the Vistula valley, known as “Panieńska Góra”, in an ecological site bordering on the railway track to the E (>15), FE8267, 50°44'47"N, 21°47'54"E, leg. R. Piwowarczyk, 2005, 2008 (KTC); **PC:** **25.** Zawadówka near Chełm – a hill surrounded by a marl peat bog in the “Torfowisko Sobowice” reserve, ca. 0.5 km W of the village (<15), GE3397, 51°07'02"N, 23°23'09"E, leg. J. Wojciak & R. Piwowarczyk, 12.07.2008 (KTC); **26.** Wolwinów – fringe communities and roadsides on the edge of a forest complex in the “Wolwinów” reserve (>20), GE3496, 51°06'46"N, 23°30'41"E, leg. R. Piwowarczyk & P. Chmielewski, 08.06.2007 (KTC); **PZ:** **27.** Nowy Dwór – fallow fields, roadsides, fringe communities and fragmentary patches of xerothermic grasslands on the “Biała Góra” slopes, ca. 1.5 km N of the village (>100), FE6879, FE6878, FE6888, 50°53'07"N, 22°40'13"E; 50°53'15"N, 22°40'20"E; 50°53'09"N, 22°39'59"E, leg. P. Chmielewski & R. Piwowarczyk, 11.07.2008 (KTC); **28.** Guzówka – fringe communities on the edge of a forest complex, ca. 0.5 km N of the village (>10), FE6991, 50°52'16"N, 22°42'31"E, vid. P. Chmielewski & R. Piwowarczyk, 11.07.2008; **29.** Elizówka – midfield initial grasslands and xerothermic scrub on a hillside, ca. 0.5 km of the village buildings (>50), FE7903, 50°51'35"N, 22°44'11"E; 50°51'16"N, 22°44'02"E, vid. P. Chmielewski & R. Piwowarczyk, 11.07.2008; **30.** Żabno – two populations; one population in a xerothermic grassland in a limestone excavation pit, by the Żabno – Żółkiewka road, ca. 0.5 km of the village (>15), the other ca. 1 km SE of the first, in a midfield xerothermic grassland (>20), FE7906, FE7917, 50°51'38"N, 22°47'03"E; 50°51'04"N, 22°47'28"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **31.** Chomęćiska Małe – xerothermic grasslands, fallow fields and alfalfa cultivation on a hillside, ca. 0.5 km SE of the village (>30), GE7247, 50°48'25"N, 23°12'44"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **32.** Niedzielska – xerothermic grasslands and thermophilous scrub with an abundant occurrence of juniper on a midfield hill, ca. 0.5 km S of the village (>30), GE8168, 50°41'32"N, 23°04'23"E, vid. P. Chmielewski, A. Cwener & W. Michalczuk, 09.10.2008; **33.** Kąty II – xerothermic grasslands on a midfield hill known as Wieprzecka Góra, neighbouring on a dirt road from the Wymysłówka village to Wychody (>100), GE8281, GE8291, GE8292, 50°40'22"N, 23°07'32"E, leg. R. Piwowarczyk, W. Michalczuk & P. Chmielewski, 02.06.2005, 2006 (KTC), leg. A. Cwener, 2007 (LBL). **34.** Kolonia Staw Noakowski – a xerothermic grassland on the slope of the Wieprz valley, ca. 0.5 km SE of the village (>100), GE7126, 50°49'48"N, 23°04'11"E, vid. W. Michalczuk, 09.08.2006; **RB:** **35.** Przewłoka – fringe communities in a midforest glade in a small forest complex, ca. 2 km S of the village (>10), GF1532, 50°26'20"N, 23°32'40"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2008 (KTC); **36.** Kolonia Jarczów I – a fallow field in the W part of the village, by the road running S towards Kolonia Korhynie (>10), GF1533, 50°26'15"N, 23°33'49"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2008 (KTC); **37.** Kolonia Jarczów II – xerothermic grassland and alfalfa cultivations on the SW forest edge, ca. 1 km S of the

village (>100), GF1573, 50°24'13"N, 23°32'58"E, leg. P. Chmielewski & R. Piwowarczyk, 12.07.2008 (KTC); **38.** Korhynie – one population is located near the exit from the village, by the road towards Jarczów near a roadside shrine; the other population is located in the “Korhynie” ecological site, on the calcareous slope of the Sołokija river valley in a xerothermic grassland (>100), GF1572, 50°24'15"N, 23°32'37"E; 50°24'35"N, 23°32'26"E, vid. P. Chmielewski, 2008; **39.** Żurawce – xerothermic grassland on the slope of the Sołokija valley, in the “Żurawce” ecological site (>100), GF1583, 50°23'43"N, 23°33'15"E, vid. P. Chmielewski & R. Piwowarczyk, 2007; **40.** Machnów Stary – xerothermic grasslands in the “Machnowska Góra” reserve (>100), GF2515, 50°22'05"N, 23°35'14"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **RŚ:** **41.** Kosobudy – xerothermic scrub on a hillside, ca. 500 m S of the village (<5), GE9159, 50°37'26"N, 23°05'49"E, vid. P. Chmielewski, 2008; **42.** Huta Dzierążyska – xerothermic grassland on the W-facing slope of the “Borowina” midfield hill, ca. 3 km SE of the village (>20), GF0413, 50°33'32"N, 23°25'34"E, leg. P. Chmielewski & R. Piwowarczyk, 15.07.2006 (KTC); **43.** Majdanek – xerothermic grasslands and fringe communities on the S- and SW-facing slope of the “Biała Góra” ecological site, between Majdan Górnny and Justynówka villages (>100), GF1407, 50°28'39"N, 23°28'35"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2006 (KTC); **44.** Ruda Wołoska – xerothermic grassland on the W- and SW-facing “Borowa Góra” slope, ca. 2 km NE of the village (>200), GF1439, 50°26'29"N, 23°29'56"E, vid. P. Chmielewski, 2008; **45.** Przeorsk – xerothermic grasslands on the “Łysa Góra” slopes, on the S edge of the “Klimowice” forest, also on roadsides on chalky rendzina between Przeorsk and a former Przeorsk state farm (>150), GF1540, GF1550, 50°25'26"N, 23°30'47"E; 50°25'13"N, 23°30'57"E; 50°25'48"N, 23°31'06"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **WG:** **46.** Bryczówka near Wirkowice – xerothermic grasslands near a closed limestone quarry (>50), GE6164, 50°52'56"N, 23°03'03"E, vid. R. Piwowarczyk & W. Michalczuk, 15.07.2006; **WU:** **47.** Wymysłów – pastures and fallow fields on a hillside, ca. 350 m E of the village (>50), FE7346, 50°50'45"N, 21°55'21"E, vid. P. Chmielewski, 08.05.2009.

VII. *Orobanche pallidiflora* Wimm. & Grab.

The species colonizes sunny fallow fields, arable fields, meadows and ruderal communities on limestone and on clay formations. Individual populations are not numerous. The vegetative period of the species is exceptionally long and starts in mid June while flowering specimens were observed as late as in October. *Cirsium arvense* is the host of *O. pallidiflora* in the study area (Piwowarczyk et al. 2010) (Fig. 2).

List of localities: **RB:** **1.** Kolonia Jarczów I – fallow fields, abandoned farms, roadsides in the E and W part of the village (>10), GF1535, GF1544, 50°26'13"N, 23°34'43"E; 50°26'14"N, 23°34'02"E; 50°26'15"N, 23°33'57"E, leg. P. Chmielewski & R. Piwowarczyk, 13.07.2008 (KTC), vid. P. Chmielewski, 20.08.2009; **2.** Wierzbica near Machnów Nowy – on the edge of a weedy field cultivation bordering on moist meadows and pastures

in the Sołokija river valley, by a dirt road ca. 1 km SW of the village (>3), GF2631, 50°20'35"N, 23°39'08"E, vid. P. Stachyra, 2008, leg. P. Chmielewski, 2008; **3.** Korhynie – a ruderal habitat in an abandoned farm on the village edge (>6 in 2009, >30 in 2010), GF1561, 50°24'39"N, 23°31'53"E, vid. P. Chmielewski, 21.08.2009, 07.09.2010; **4.** Żurawce – a highly degraded xerothermic grassland with the dominance of ruderal vegetation, in the “Żurawce” ecological site (>5 in 2009, >10 in 2010), GF1583, 50°23'49"N, 23°33'19"E, vid. P. Chmielewski & K. Barańska, 07.10.2009, vid. P. Chmielewski, 08.09.2010; **RŚ:** **5.** Przeorsk (1) – a degraded, slightly moist meadow and a fallow field in the Sołokija river valley on the border with xerothermic grasslands and arable fields, by the road from Przeorsk towards Jarczów (>30), GF1550, 50°25'27"N, 23°30'59"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **6.** Przeorsk (2) – ca. 400 m E of the village buildings, on the SW slope of the Łysa Góra hill, in an arable field (four specimens in 2007, one specimen in 2008), GF1560, 50°25'14"N, 23°30'59"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC).

VIII. *Orobanche picridis* F. W. Schultz

The species is included in the red data book as endangered (Zarzycki 2001). It parasitizes *Picris hieracioides* and is recorded only in highly sun-exposed initial calcareous communities, mostly in fallow fields and xerothermic grasslands where it often forms very large populations. It flowers from mid June to mid July (Fig. 6).

List of localities: **MPW:** **1.** Wesołówka near Tarłów, the borderline between the PI and the MPW (Bróż et al. 2001; Piwowarczyk 2006, 2010b) – fallow fields, baulks, field edges and in initial xerothermic grasslands with a sparse field layer, on chalky rendzina, by the edge of the Vistula valley in the NE part of the village known as “Modrzywka” by local residents. *O. picridis* grows here in a few

scattered populations. A total of 600 specimens were recorded. FE6206, 50°58'39"N, 21°47'44"E, vid. R. Piwowarczyk, 1999-2010; leg. R. Piwowarczyk, 1999, 2008 (KTC); **2.** Dorotka – the locality borders on the PI (Piwowarczyk 2010b), SE part of the village, near a field road towards Sulejów (>20), FE5275, 50°59'56"N, 21°47'11"E, vid. R. Piwowarczyk, 2001-2006; leg. R. Piwowarczyk, 01.06.2002 (KTC); **PZ:** **3.** Nowy Dwór – fallow fields, roadsides, in fringe communities and fragmentary patches of xerothermic grasslands on the slopes of the “Biała Góra” hill, ca. 1.5 km N of the village (>500), FE6878, 50°53'07"N, 22°40'11"E, leg. P. Chmielewski & R. Piwowarczyk, 11.07.2008; **RB:** **4.** Żurawce – initial xerothermic grasslands on the slope of the Sołokija valley in the “Żurawce” ecological site (>300), GF1583, 50°23'37"N, 23°33'24"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **5.** Machnów Stary – fallow fields and initial xerothermic grasslands in the “Machnowska Góra” reserve (>500), GF2515, 50°22'23"N, 23°34'51"E, leg. P. Chmielewski & R. Piwowarczyk, 09.06.2007 (KTC); **RŚ:** **6.** Żurawnica near Zwierzyniec – fallow fields and roadsides on hillsides, ca. 2 km SE of the village buildings (>500), GE9131, GE9141, 50°38'27"N, 22°58'56"E, leg. P. Chmielewski & R. Piwowarczyk, 25.06.2008 (KTC); **7.** Blizów – fallow fields and fragments of mesoxerothermic grasslands, ca. 1 km N of the village (>50), GE9262, 50°36'23"N, 23°07'37"E, leg. W. Michalczuk & R. Piwowarczyk, 16.07.2006 (KTC).

CONCLUSIONS

The list provides data on the occurrence of eight species belonging to the genus *Orobanche*: *O. alba* (21 localities), *O. alsatica* (8), *O. arenaria* (1), *O. caryophyllacea* (16), *O.*

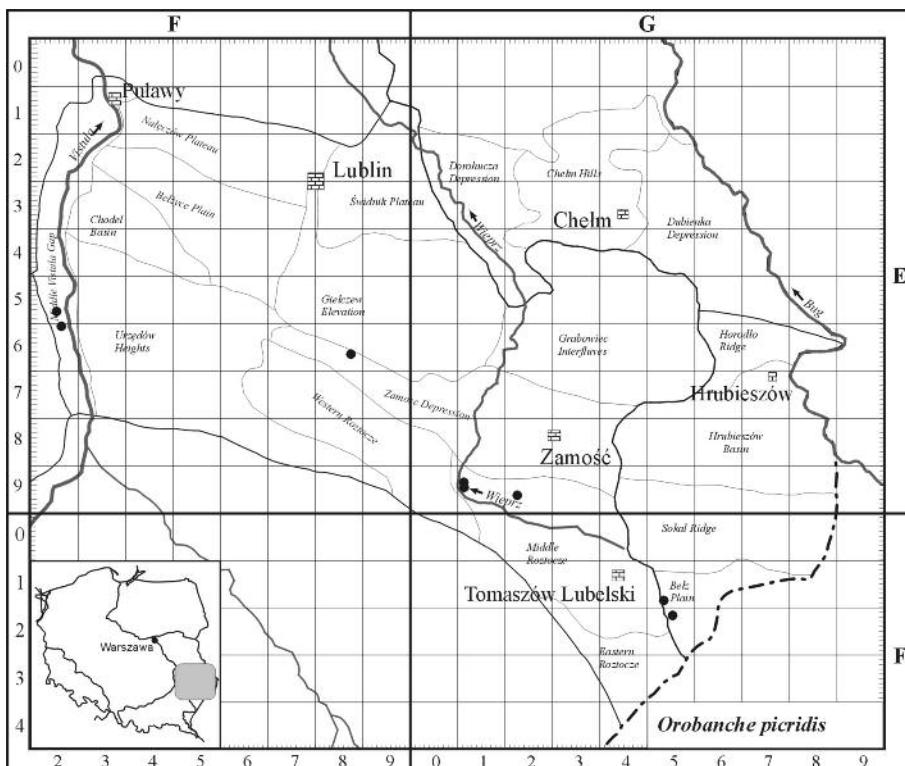

Fig. 6. Distribution of *Orobanche picridis* in SE Poland.

elatior (32), *O. lutea* (47), *O. pallidiflora* (6), *O. picridis* (7). *O. lutea* as well as *O. elatior* and *O. alba* were the most frequently recorded species. *O. arenaria*, *O. caryophyllacea*, *O. alsatica*, *O. picridis* and *O. pallidiflora* were the least frequently recorded species. *O. arenaria* was reported from the area for the first time. The majority of Polish localities of *O. alba* and *O. alsatica* are situated here. *O. coerulescens*, *O. purpurea* and *O. ramosa* (Fijałkowski 1994) were not recorded despite efforts made to find them.

All of the taxa (except *O. lutea*) examined in the list are red listed (Zarzycki and Szeląg 2006) and one taxon, *O. picridis*, is included in the red data book (Zarzycki 2001).

The most abundant localities were recorded, for instance, in the Grabowiec Interfluvies, Sokal Ridge, Bełz Plain, Zamość Depression or the Middle Vistula Gap. Many habitats preferred by species of the genus *Orobanche* can be found in these mesoregions: xerothermic grasslands, fallow fields, thermophilous scrub and oak forests, situated on river valley slopes, midfield escarpments, ravines or gorges, numerous in the area and developed mostly on the rocks of the Upper Cretaceous period.

Ten species belonging to five families: Asteraceae, Fabaceae, Lamiaceae, Apiaceae and Rubiaceae, were recorded as hosts of *Orobanche* species. Those are: *Artemisia campestris* (*O. arenaria*), *Centaurea scabiosa* (*O. elatior*), *Cirsium arvense* (*O. pallidiflora*), *Picris hieracioides* (*O. picridis*), *Medicago falcata*, *M. sativa* (*O. lutea*), *Salvia verticillata* (*O. alba*), *Peucedanum cervaria* (*O. alsatica*), *Gallium mollugo* and *G. verum* (*O. caryophyllacea*).

This work is the first study to report the results of current and special research into the distribution, habitat conditions and hosts of species belonging to the genus *Orobanche* covering considerable areas in Poland.

ACKNOWLEDGEMENTS

The authors thank Wiaczesław Michalcuk and Janusz Wójciak for their help during field studies and Prof. Adam Zająć for helpful comments on the manuscript.

This work was supported by the Ministry of Science and Higher Education (grant no. NN303357733(2007-2009) and NN303551939 (2010-2011)).
